PROJECT TITLE: USE PERMIT U-60-50 DARREL MANNAN

As the result of an initial study, it is concluded that with the mitigation measures noted in the initial study added to the project:

A. The project will not have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self sustain levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory.

B. The project will not have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals.

C. The project will not have possible environmental effects which are individually limited but cumulatively considerable. "Cumulatively considerable" means that the incremental effects of an individual project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.

D. The environmental effects of a project will not cause substantial adverse effects on human beings, either directly or indirectly.

As a result thereof the preparation of an Environmental Impact Report pursuant to the Environmental Quality Act of 1970 is not required.

An initial study is attached.
