III. DISCUSSION OF ENVIRONMENTAL EVALUATION
(Attachment to Environmental Impact Assessment Checklist - Part II
PRC 5120 - Cyrus A. Johnson

- E1. McKinney Bay, Lake Tahoe is designated as a fish spawning/habitat restoration area on the Tahoe Regional Planning Agency maps. Placement of buoys at this location will not substantially change the lake bottom and thus will not adversely affect the spawning habitat. Recreational use induced in this area of the Lake by the project may affect fish productivity minimally.
- M5. Two of the buoys of this application are located approximately 120 feet from shore directly in line with the north and south boundaries of parcel 097-122-15. The existing pier, located on the south property line of this parcel, is already permitted by the State Lands Commission. The third buoy in this application is located on the Johnson parcel, located directly to the south of 097-122-15, on parcel 097-122-16, and is approximately 225 feet south of the Stevick/Johnson property line, also 120 feet from shore.
- There are permitted structures to other individuals located to the south of the Johnson parcel. A permitted buoy is located approximately 150 feet south of the Johnson's southern parcel boundary, followed by a pier located approximately 200 feet south, and another pier approximately 300 feet further south.
- The three buoys of this application are located adjacent to private upland ownership and when boats are secured to them, will limit public access by boat to the shore area at these locations, and will continue to restrict use of the shore area available to trolling fishermen out 120 feet or more from shore, which is where the closest shoreward trolling can take place along this shorezone segment. There are no stretches of shore 800 feet or more clear of waterward structures in this area, therefore there is no significant effect to trolling in this area.
- R1. Buoys themselves do not present much of a visual obstruction, According to The Cumulative Impacts of Shorezone Development at Lake Tahoe, by Phillips, Brandt, Reddick, McDonald, and Grafe, dated February 1978, pp.4-79, in public responses to visual aspects of shorezone development and use, a grouping of seven boats closely spaced was considered to be a "visual dislike", therefore this proposal does not constitute a significant effect.
- S1. The quality and quantity of recreation will change to the owners of these buoys, who will benefit in more convenient, and perhaps more frequent recreational use of Lake Tahoe. Recreational quality will not substantially change for top-line trollers as mentioned in discussion of M5 above.
