2. The existing improvements serve the Lessee's upland abalone rearing facility. The proposed extension of the three existing intake pipelines and the addition of the two new intake lines is intended to place the saltwater intake lines at their seaward terminus beyond the influence of storm generated waves and littoral currents thereby reducing the potential damage to the intake pipelines. Additionally, the pipeline design is intended to provide a combination of stability and flexibility.
3. The installation of the two new intake pipelines will follow the same corridor as the three existing intake lines, but will extend further into the Pacific Ocean.
4. On October 13, 1998, the California Coastal Commission (CCC) granted Permit #4-98-209 for this project under its certified regulatory program (Title 14, California Code of Regulations, section 15251(c)). Staff has reviewed the document and determined that the conditions, as specified in Title 14, California Code of Regulations, section 15253 (b), have been met for the Commission to use the environmental analysis document certified by the CCC as a Negative Declaration equivalent in order to comply with the requirements of the CEQA.
5. This activity involves lands identified as possessing significant environmental values pursuant to Public Resources Code sections 6370, et seq. Based upon the staff's consultation with the persons nominating such lands and through the CEQA review process, it is the staff's opinion that the project, as proposed, is consistent with its use classification
