concrete fill and seawall to protect the base of the bluff adjacent to their blufftop homes at 311 and 319 Pacific Avenue in Solana Beach. The city found that lower sand levels and wave action have resulted in the undercutting of the lower bluff causing a 15-foot high notch to form. The city found that the existing homes were in imminent danger of destruction because of the unstable condition of the bluff.

On January 17, 2001, the California Coastal Commission (CCC) issued Emergency Permit #6-01-001-G to the Applicant and Mr. Scism to construct the notch fill and install a row of 16 soil nails to contain the bluff fracture. The emergency permit required the applicants to submit an application for a regular coastal development permit to authorize the completed emergency work and allow construction of a seawall along the face of the bluff.

On March 13, 2001, the CCC approved the issuance of Coastal Development Permit #6-00-36 to Mr. Corn and Mr. Scism, subject to several conditions. The conditions include providing the CCC with periodic reports monitoring the condition and performance of the notch fill/seawall, and the payment of \$18,772 into a beach sand replenishment fund.

Staff is recommending that the Commission authorize the issuance of a General Lease - Protective Structure Use to the Applicant. Calendar Item 75 addresses Commission staff's recommendation concerning the portion of the project adjacent to Mr. Scism's residence.

3. On March 13, 2001, the CCC granted Permit #6-00-36 for this project under its certified regulatory program (Title 14, California Code of Regulations, section 15251(c)). Staff has reviewed the document and determined that the conditions, as specified in Title 14, California Code of Regulations, section 15253(b), have been met for the Commission to use the environmental analysis document certified by the CCC as a Negative Declaration equivalent in order to comply with the requirements of the CEQA.
