2. The Sacramento River Bank Protection Project, authorized by Congress in 1960, directs the U.S. Army Corps of Engineers (Corps) to provide bank protection along the Sacramento River and its tributaries. The State Legislature authorized the participation of the Central Valley Flood Protection Board (CVFPB), formerly called The Reclamation Board, in the Sacramento River Bank Protection Project.

A Master Lease to CVFPB for the Sacramento River Bank Protection Project was authorized by the State Lands Commission on May 9, 1988, effective May 1, 1988. The Master Lease authorizes maintenance of existing bank protection structures and construction of new bank protection structures as specific construction sites become known. The Master Lease also requires the CVFPB to seek amendments of the lease to include new sites.

3. Under this application, the CVFPB, in partnership with the Corps under the Sacramento River Bank Protection Project, is proposing to repair six additional levee sites which require immediate work to prevent levee failure.
4. The damaged levees are located in Cache Slough, the Sacramento River and Steamboat Slough. The proposed levee repair work may consist of excavating damaged areas beyond the area of the identified repair site to include backfilling, compacting and grading to pre-flood conditions. The damaged areas will be covered with rock protection and bedding material for the planting of native grasses and approved native trees. These areas are dominated by native and non-native grasses, and herbaceous vegetation. Along and within the project repair sites are riparian corridors of various sizes consisting of large riparian trees and other woody vegetation. Project construction would be conducted to avoid or minimally disturb the existing vegetation.

The levee slopes at these locations vary; several repair sites are away from the main water channel and others would be along the water and alter aquatic habitat. Work will be done within construction windows imposed by the NOAA Fisheries and the California Department of Fish and Game (CDFG) to protect salmonids. In addition, the Lessee, through a Memorandum of Understanding entitled "State-Federal Action Plan for Expedited Levee Repair" dated October 31, 2006, and through the Inter-Agency Collaborative, will consult on each repair site to ensure that

activities will not result in a negative impact to endangered species and species of special concern.

5. The Corps has initiated informal Section 7 consultation with the US Fish and Wildlife Service (USFWS). USFWS has issued a Planning Aid Letter with recommendations for avoiding impacts and has concluded that the project is not likely to adversely affect any listed species.
6. A Mitigated Negative Declaration was prepared and adopted for this project by Central Valley Flood Protection Board. The California State Lands Commission's staff has reviewed such document.
7. A Mitigation Monitoring Program was adopted by the Central Valley Flood Protection Board.
8. This activity involves lands identified as possessing significant environmental values pursuant to Public Resources Code sections 6370, et seq. Based upon the staff's consultation with the persons nominating such lands and through the CEQA review process, it is the staff's opinion that the project, as proposed, is consistent with its use classification.
